R & S Steel and Stainless Steel Counter Doors combine the strength and durability of a rolling service door with compact design and neat appearance. Although primarily utilized as closures on counter tops in schools, churches, and in office buildings, it may also on openings providing walk-thru or Drive thru access. Counter doors can provide modified construction for stainless steel service door requirements to 16 feet wide, 10

FEATURES:

- . 12" to 14" Headroom Square Brackets
- . Between-Jamb or Face Mounting
- . Grey, Tan or Stainless Steel Finishes
- . Push-Up, Awning Crank , Chain, Motor
- . Galvanized Steel Slat baked on polyester rust inhibited prime coat

#17 Slat Type

Optional

Vision Lites: single or multiple cutouts, open for ventilation or covered with acrylic

Key Cylinder Locks: on footpiece

Powdercoat Finish: a durable and decorative finish for steel or aluminum surfaces. It provides longer life and requires less maintenance than a standard finish. Powder coating is available in a variety of colors for use on many products.

Tubular Motor Operator: motors completely contained within the barrel can be provided for counter doors up to 84 square feet in limited usage applications. Only the manual crank override is visible outside the bracket. The units are available in 115 volt/single phase with constant contact one button or keyswitch control. They can also be provided with a low voltage controller when options such as a reversing edge or timer are required.
